

DONGHYEON RYU

Vehicle Operations · Data Collection · Safety-Focused Testing

Safety-focused candidate for vehicle operations with a clean driving record and extensive city and highway experience. Brings practical experience with driver-assistance features plus project work in data validation, route scoring, visual monitoring and structured issue feedback.

Born Mar 5, 2000 · Age 26 · Ulsan, South Korea
 dongh305@gmail.com

+82 10-8701-2903
 ryugpt1.github.io · github.com/RyuGPT1

2+ YEARS Driving experience	CLEAN No accidents or penalty points	CITY + HIGHWAY Extensive experience in both environments	170 / 200 TOEIC Speaking · AL
---------------------------------------	--	--	---

DRIVER PROFILE

License	Class 2 Ordinary
Issued	2020
Roads	Urban & highway
Navigation	Frequent route planning
Driver assist	Frequent use of adaptive cruise control, lane-keeping & steering assist

OPERATION READINESS

- ✓ Open to commuting to or relocating to Busan
- ✓ 16:00–01:00 night shift
- ✓ Weekend work
- ✓ Domestic & international travel
- ✓ Available from Aug 2026

TOOLS & LANGUAGES

Windows	Word	Excel
Python	Git	

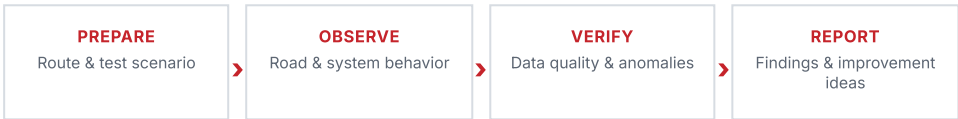

Korean	Native
English	TOEIC Speaking 170 / 200 (AL)

Attended school in the Philippines for six months; comfortable communicating across cultures.

CERTIFICATIONS

- Industrial Safety Engineer (Korea)
- Construction Safety Industrial Engineer (Korea)
- Class 2 Ordinary Driver's License

01 TESTING & DATA WORKFLOW

02 RELEVANT PROJECT EXPERIENCE

- A SafeFit AI** Solo Project · 2026
Structured AI output · deterministic scoring · validation loop
 - Built a hybrid pipeline that normalizes free-form work descriptions into structured risk tags and safety quiz items using React, FastAPI, SQLite and the OpenAI API.
 - Added schema validation, deterministic scoring and manager feedback loops to make outputs traceable and reusable.
- B SafeRoad · Pedestrian Safety Navigation** Geospatial Data · 2026
Pedestrian-activity API · route scoring · map comparison
 - Built a nighttime pedestrian-navigation prototype that favors streets with more pedestrian activity over the shortest route.
 - Converted pedestrian-activity data from a public API into route scores and map comparisons, making the trade-off between activity and travel distance visible for review.
- C Industrial PPE Detection** Computer Vision · 2026
Multi-input detection · rule-based post-processing · result review
 - Implemented YOLO-based PPE detection with person-level post-processing across image, video and webcam inputs.
 - Built a Gradio review interface to compare outputs and surface detection or input issues.

03 ADDITIONAL PROJECT EVIDENCE

- Subscription Management Agent** 2026
Unstructured input → structured records

Parsed natural-language subscription entries into normalized fields and synchronized one data model across a Discord bot, FastAPI, SQLite and a Streamlit dashboard.
- LoopBin** May–Jun 2026
Backend architecture · operational routing

As team lead, designed the backend, database and public-data integration for prioritized clothing-bin pickup routes, connecting collection status to an operator-facing map workflow.

04 EDUCATION & TRAINING

- 2019.03 – 2025.02**
Tongmyong University
Bachelor's Degree in Architectural Engineering
GPA 3.84/4.5 · Major 4.03/4.5
- 960 HOURS · COMPLETED**
HDC Labs
Generative AI for Smart IoT Analytics & Service Development
